

Our vision

Our central idea:

„Let's make the world a lot greener“ .
This is our vision and our incentive, for which we give our best every day.

What we want to achieve:

We want to contribute to sustainability, climate protection and the reduction of industrial CO₂ emissions.

What drives us every day:

To transform our vision into a product and to disseminate, improve and further develop the technology for it.

Our values

What we stand for:

Sustainability, dynamism, freedom and appreciation. We take responsibility – for the environment, for our work and for the people in our company.

What is important to us as a company:

We focus on project culture and open cooperation – in a dynamic team to which everyone contributes as an individual and which jointly focuses on success.

This is our work attitude:

We understand corporate culture as interdisciplinary cooperation. Following the principle of „enabling and demanding“, we want to reconcile individual freedom and joint success.

Our mission

Our company:

We are a manufacturer of high-temperature industrial heat pumps. The ThermBooster™ ensures the utilization of industrial waste heat and the generation of high-quality process heat in many industries and processes..

What makes us unique:

The ThermBooster™ generates significantly higher temperatures than conventional industrial heat pumps. With our know-how and our quality standards, we cover a wide range of industrial requirements.

Our particular benefit:

Thanks to its modular design, the ThermBooster™ can be integrated into almost any production environment. We are committed to delivering the highest quality – in our product, our technology and our consulting.

What we do to achieve our greatest goal and vision:

We are a young company to which we bring many years of experience. We want to grow and continuously develop ourselves and our technology.
